We are so excited to be integrating STEM learning into our curriculum! STEM focuses on implementing Science, Technology, Engineering, and Math as part of our daily lives and fascinating career paths. We will be offering STEM as part of our Specials Rotation AND our Robotics and Coding after school clubs!

The Robotics Club meets once a week in the fall. We partner with First Lego League to complete missions that help our students to problem solve and work together. We attend the culminating competition in January to present our solutions and learn from other groups!

Our Coding Club also meets weekly beginning in January. We use Google CS First to introduce the students to the language that drives almost all of the technology around them. They love to add their own personal styles to their algorithms! Students share their creations and encourage each other in every effort. Competition is usually held in March and is always fun and inspiring for the kids.

Applications can be picked up from your teacher or from Mrs. McMurray!

Thanks for supporting these amazing programs and your student's learning!
